Introduction

The following information is extracted from AIP Denmark and VFR Flight Guide Denmark (VFG) and connects to ICAO ANC 1:500.000 DENMARK (ANC) dated 16 APR 26. The ANC dated 16 APR 26 is published in paper and digital. The digital version will continuously be updated by AIRAC dates. The paper version will be updated once a year.
This document and latest ANC can be found on the Internet: https://aim.naviair.dk

Aerodromes. Availability

Public Aerodromes

The Danish public aerodromes are open for traffic to and from other States as indicated on the list below.

Customs clearance is compulsory for all flights to Denmark. Immigration is compulsory except for flights between the Schengen States.

List of Schengen States:

Austria, Belgium, Bulgaria, Croatia, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Italy, Latvia, Lichtenstein, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and The Czech Republic.

Civil use of Military Air Bases

General

Use of military air bases in Denmark with other than State registered aircraft may be made solely when prior permission has been obtained.
The use of military air bases as an alternate aerodrome may likewise be made solely when prior permission has been obtained.
Aalborg Air Base is not affected by these regulations.
Permission to use Karup Air Base will be granted unless special conditions may be regarded as prohibitive.
As regards other bases a permission may be granted only if the conditions are favourable.
A permission may at any time be withdrawn with immediate effect, should circumstances so require.

Submission of Application

Application in writing for permission to use a military air base shall be submitted direct to the air base concerned well in advance of the date of the flight.

Addresses

Karup Airport, Airport Office, N.O. Hansensvej 4, DK-7470 Karup J.
TEL: +45 97 10 06 10, FAX: +45 97 10 06 65.

Vojens/Skrydstrup Airport, Lilholtvej 8, Skrydstrup, DK-6500 Vojens
TEL: +45 74 59 16 54, FAX: +45 74 54 00 06.
E-mail: airport@vojens.dk

Application form is available on the Internet: http://vojenslufthavn.dk

Rules and Conditions

Operations on the air base must be carried out in accordance with the rules and conditions stated in the following with due regard to such other conditions as may have been stipulated for each individual permission.

a. A flight plan shall be submitted for each flight. During flight in controlled airspace and during operations on the manoeuvring area, the pilot-in-command shall closely observe the directions given.

b. The Commander of the Air Base lays down the rules which are to be observed by flight crew members and passengers concerning security measures, traffic and stays at the air base. As regards to the Air Bases Karup (Karup/Midtjylland Airport) and Skrydstrup (Vojens/Skrydstrup), photographing from the air as well as on the ground is prohibited. At the remaining air bases the local ban on photographing will apply, as published by posters.
Flight crew members, respectively ground personnel, shall immediately report to the air base in case it is surmised that the ban on photographing has been violated.

c. The Defence Forces shall not be liable for theft, and fire-, water- or other damage to aircraft, their equipment, flight crew members, passengers, cargo, etc., caused during stays at the air base.
The Defence Forces reserve their right to claim compensation for damage caused by civil aircraft, flight crew members or passengers to the Air Force material, buildings and personnel within the area of an air base.

d. Landing- and other charges will be collected in accordance with the provision of the current "Tariff Regulations applying to Public State-operated Airports in Denmark" approved by the Ministry of Transport.

Karup Air Base. Special Regulations

Request on permission for individual flights to use the military Karup Air Base, within the civilian Karup Airport A/TS Reporting Office hours can be made by phone or telefax, as late as the date-of-flight.
If the requested flight will be conducted outside the civilian Karup Airport A/TS Reporting Office hours, the request has to be submitted not later than one hour prior to closing time.

Private Aerodromes

A private aerodrome is an aerodrome, which is not open to the public. Such aerodrome can be shown on this chart, if the owner so desires, provided

- that the aerodrome is registered according to Regulations for Civil Aviation BL 3-7, and
- that the runway length is at least 500 M, and
- that at least 100 operations are taking place in the busiest month of the year, or
- that the aerodrome is approved by the Danish CAA.

For use of private aerodromes it generally applies that prior permission must be obtained from the owner. Private aerodromes may be affected by local environmental restrictions regarding the maximum permitted number of operations, the permitted periods for use and compulsory routings to/from the aerodrome. Information about this shall be obtained from the owner. A list of private aerodromes is shown in the VFR Flight Guide, which is also available on the Internet: https://aim.naviair.dk. NOTAM for private aerodromes will not be issued.

Heliports

Separate public heliports are presently not established. However, helicopter operations may normally take place on public aerodromes.
In connection with exploration and production of oil and gas in the North Sea, a number of helidecks are established as shown in figure 2. Helidecks are also established in vicinity of off-shore Wind Farms. A brief description is given in the VFR Flight Guide (VFG), which is available also on the Internet: https://aim.naviair.dk. These helidecks are available only after prior arrangement with the owner/operator. NOTAM for private heliports and helidecks will not be issued.

Public Holidays (HOL)

New Years Day (1 JAN)
Maundy Thursday (THU before Easter)
Good Friday (FR before Easter)
Easter Monday (MON after Easter)
Ascension Day (6th THU after Easter)
Whit Monday (MON after Whit Sunday)
Christmas (25 DEC)
Boxing Day (26 DEC)

Note: Some administrative services, banks and alike may be closed on the following days:
Labour Day (1 MAY)
Constitution Day (5 JUN)
Day of Christmas Eve (24 DEC)
Day of New Years Eve (31 DEC)
FRI after Ascension Day (5th FRI after Easter)

Navigation Warnings etc.

Prohibited, Restricted, and Danger Areas

Definitions

a. Prohibited area (P): Area within which flight is prohibited.
b. Restricted area (R): Area within which flight may take place only on certain conditions, e.g. after prior permission from ATS.
c. Danger area (D): Area within which activities dangerous to flights may take place, e.g. gun firing.

These areas are identified by two nationality letters EK, the letter P, R or D and a number.

Information about activities

Information about the period and height within which activities actually take place may be obtained from 119.100 (119.100 MHz) Flight Radio. However, activities on SLN and MON may be obtained already friday from 1100 (1000). For information contact ACC (CS: Copenhagen Control), FIS (CS: Copenhagen Information), and the following offices at the following airports/aerodromes:

Aalborg	Kebenhavn/Kastrup
Aarhus	Kebenhavn/Roskilde
Billund	Lolland Falster/Maribo
Bornholm/Ronne	Odense /
Esbjerg	Hans Christian Andersen Airport
Karup/Midtjylands Lufthavn	Staurning
Kolding/Vamdrup	Sønderborg

Information about active areas and NOTAM can be obtained on the Internet: https://briefing.naviair.dk.

VFR-flying with Military Aircraft

VFR-flying with military aircraft takes place within Kebenhavn FIR and over the Island of Bornholm. In airspace where the speed limitation 250 KT is valid, military fighter-aircraft will due to the aerodynamic characteristics of the aircraft and the mission objective not be able to comply with the 250 KT speed limitation in all cases.

Temporary Segregated Areas (TSA)

Within the areas shown in figure 1. special training flights with military fighter aircraft may take place periodically. The training flights are conducted with due regard to civil traffic, but the flights will in the actual airspaces, be conducted in such way may not always be complied with. Information about the period and height where activities are planned to take place are notified by NOTAM. Information about actual usage can be obtained by relevant ATS units.
VFR flights should not enjoy entering an active TSA, if entry cannot be avoided, two-way radio communication should be established with relevant ATS-unit. The ATS-unit will forward the information to the military ATS-units concerned.

Temporary Reserved Areas (TRA)

Within the areas shown in figure 1. special training flights with military fighter aircraft may take place periodically. The training flights are conducted with due regard to civil traffic but the Rules of The Air procedures concerning right-of-way may not always be complied with. Information about actual usage can be obtained by relevant ATS units.
IFR flights in controlled airspace penetrating an active TRA will be separated from special training flights with the prescribed separation minima. For IFR flights in uncontrolled airspace penetrating an active TRA the ATS-unit in contact with the IFR flight, will forward that information to military ATS-units concerned.
VFR flights should avoid entering an active TRA. If entry cannot be avoided, two-way radio communication should be established with relevant ATS-unit. The ATS-unit will forward the information to the military ATS-units concerned.

Fixed Obstacles

a. All known fixed obstacles of a height of 328 FT (100 M) AGL or more are shown on ANC 1:500 000.
Fixed obstacles of a height less than 328 FT (100 M) AGL are shown if it is deemed necessary.
b. Fixed obstacles of a height of 492 FT (150 M) AGL or more are marked.
Fixed obstacles of a height less than 492 FT (150 M) AGL are marked if it is deemed necessary.

Cable Launching of Glider and Hang Glider

Cable launching may take place at some sites up to a height of 2500 FT MSL. The cable forms an almost invisible obstacle during launch as well as when falling to the ground. After release, the cable will fall to the ground in the direction with the wind, away from the winch. Normally the cable will fall within the limit of the site, but situations may occur where the cable will fall outside the site.
Collision with the cable may cause damage to an aircraft, in worst case be fatal. A safety distance of 1 NM from the position of the site is considered to be sufficient. Frequency 130.130 MHZ is assigned for operational communication between hanggliders and ultra light aircraft in Aalborg A/TS Reporting Office.
Glider and hang glider sites are shown on ANC 1:500 000.

Ballooning

Frequency 122.655 MHZ is assigned for operational communication between balloons and ground personnel.

Parachuting

Parachuting may take place at many locations throughout the country. Locations, known by the Danish CAA, as being frequently used are shown on ANC 1:500 000. Frequency 123.500 MHZ is assigned for operational communication between parachuting and ground personnel. NOTAM about parachuting will be issued only in case of a special and intensive activity and if the Danish CAA has been informed thereof.

Helicopter frequencies

The following frequencies are assigned only for communication between helicopter and ground personnel:
- For medical purposes: 121.080
- For helicopter hoist operations: 125.405

The frequencies can be used up to 2000 FT on Danish territory.

Helicopter Operations in the North Sea

Helicopter operations to, from and between oil and gas installations in the North Sea are taking place on a 24 hours basis, under IMC as well as VMC, and often with an undercarriage load, and in heights up to FL 85.

Helicopter routes (HR)

HR have been established for the most used helicopter tracks in that part of the North Sea, where A/TS is provided by Denmark.

Other air traffic than civil helicopter operations are advised

a. to avoid flying along or in close vicinity of a HR, and
b. to cross a HR at an angle as close to 90° as possible, and to keep an alert look out.

The following frequency (MHZ) is assigned only for communication between helicopter and helideck personnel on offshore installations in the North Sea:
- For helicopter Operations North of 56 00 00N 131.760
- For helicopter Operations South of 56 00 00N 123.455

The frequency can be used up to FL 100 in the North Sea.
The HR and the fixed oil/gas installations are shown in figure 2.

"Cold Flaring" in the north Sea.

In connection with the exploration and production of oil and gas in the North Sea, "Cold Flaring" may occur which could endanger air traffic.

Gas escaping from the oil production will normally be burned off. When the oil production is restricted after a shut down or restarting opening of the installations to the atmosphere it is necessary to purge the pipework and vessels before reignition of the gas. During this procedure, called "Cold Flaring", large amounts of gas will be purged into the atmosphere, creating an explosive mixture. The extend of the mixture is depending on the actual weather conditions.

"Cold Flaring" may take place from all fixed and mobile oil- and gasinstallations.

Actual information about "Cold Flaring" may be obtained from Tyra Information within hours of service.

Air traffic is advised to pass installations from which "Cold Flaring" is taking place at a lateral distance of 3 NM or more or at an altitude of 3.000 FT MSL or above.

Risk of Explosion in the Vicinity of North Sea Oil and Gas Installations

In connection with perforation of underground wells, explosive charges are released by means of radio waves.

Radio waves covering the whole frequency spectrum might release an explosion if they are received when detonators are being inserted or removed.

To avoid inadvertent explosion, which can be a risk to the crew on the installation and damage the installation, air traffic is strongly requested to pass all fixed and mobile installations at a lateral distance of 1 NM or more or at an altitude of 3000 FT MSL or above. For fixed oil and gas installations, see AD 3-1.

Burning of Gas and Consistent Heavy Flare Stacks

From the flare stacks located at the positions listed below escape and burning of gas and condensates may take place occasionally. See also ENR 5.4.

West of Vyrde at PSN 55 40 00N 006 21 59E *
S of Kalundborg at PSN 55 39 13N 011 06 01E *
SW of Egtved at PSN 55 35 57N 009 13 57E
N of Viborg at PSN 56 38 25N 009 25 03E *
SE of Nærvtved at PSN 55 12 37N 011 59 08E
NE of Stenlille at PSN 55 32 58N 011 37 25E

Due to high temperature and risk of explosion it is recommended to avoid overflying below 2000 FT MSL.
The flare stacks are shown on ANC 1:500 000.

Bird Migration

General

Bird migration occurs during the whole year, but culminates in the periods end of March to Mid-May (spring migration) and beginning of September to Mid-November (autumn migration).

Spring Migration

Spring migration culminates in the period end of March to Mid-May. Peak numbers for most species occur in April. The most important factors inducing heavy migration are a rise in temperature over Central and Western Europe, light winds, and southerly winds.
At night, migration is generally in a broad outline covering the entire country and its surrounding waters, with mean direction NNE. Most birds come from Central and Western Europe. In daylight migration tends to concentrate along guiding coasts. The most important points of concentration are:

a. Skagen 57 45N 010 35E
b. Fornæs 56 25N 010 55E
c. North-East Fyn 55 20N 010 45E
d. North and East Sjælland 56 00N 011 40E - 55 20N 012 30E

Generally the altitude of migration at night is higher than by day. At night the average altitude is about 3000 - 5000 FT, by day 1500 - 3000 FT.

Autumn Migration

Autumn migration culminates in the period beginning September to Mid-November. Peak numbers for most species occur in October. The most important factor inducing heavy migration is fall in temperature over Central and Northern Scandinavia. High intensity corridors also with winds from NNE, light winds, little cloud-cover and high atmospheric pressure.
At night, migration is in a broad outline covering the entire country and its surrounding waters with mean direction south. Most birds come from southern part of Norway and southern part of Sweden. By day, migration tends to concentrate in the eastern part of Denmark and along guiding coasts. The most important points of concentration are:

a. Falsterbo (southern Sweden) and Stevns 55 25N 012 50E - 55 20N 012 30E
b. Gedser Rodby 54 35N 011 55E - 54 40N 011 20E
c. Skagen 55 15N 011 18E
d. South Langeland 54 45N 010 40E
e. Blåvand 55 35N 008 05E

Generally the altitude of night migration is higher than by day. At night the average altitude is about 3000 - 5000 FT, by day about 1000 - 3000 FT.

Numbers of Birds

At least 100 million birds pass over Denmark and its surrounding waters during autumn. Smaller passerines are dominating. Several species occur in great numbers and are most hazardous to aircraft, e.g. starlings, thrushes and finches. Very numerous and hazardous are also crowbirds, ducks, gulls, waders, pigeons and birds of prey, occurring from tens of thousands to several millions.
